

FITS FROM — Go-To-Market

Zero-budget, culture-first. The product is the fit file; distribution is answering questions people are already asking. Lesson learned from r/ThrowingFits: never lead with “AI,” never rec mall brands, lead with measurements-in → size-out and real celebrity fits.

Phase 0 — Foundations (this week)

- fitsfrom.com purchased and connected · GitHub pushed · Sovrn application submitted (approval takes days — start now) · IG post links swapped in for fit photos · OG cards + analytics.

Phase 1 — Answer engine (weeks 1–8)

Reddit (trust engine)

Subs: r/ThrowingFits, r/malefashionadvice, r/streetwear, r/OUTFITS, r/findfashion, r/frugalmalefashion, r/rawdenim, r/fragrance + team subs (r/lakers etc.) on tunnel-fit threads.

Playbook: search “where did he get / ID this” daily → answer with the exact piece and sizing note, no link. After ~2 weeks of karma, close answers with the fit-file link. Ratio: 5 clean answers per 1 link. Never say AI; say “size chart math.”

Pinterest (search moat)

Pin every fit photo + every piece; boards per person (“Poole Party fits”) and per style. Pins rank in Google Images for “[name] outfit” and compound for years. 15 min/week.

Instagram + TikTok (brand engine)

Carousel template: photo → piece-by-piece slides w/ price + your-size framing → “full file in bio.” 3/week minimum. TikTok: 20-second breakdowns of the fit of the day; the daily rotation IS the content calendar.

Phase 2 — Partnerships (after ~10k monthly visits)

Small brands first (see PARTNERS.md: skate + downtown NYC list). Email template: show them their fit file + click receipts → ask for exclusive code FITSFROM15 + 15% direct commission (self-proving attribution; beats network rates). Before volume exists, Sovrn covers every link automatically — no outreach needed to earn.

Celebrity/stylist track: feature first with credit (Matthew Henson, Courtney Mays, Kesha McLeod, Marcus Paul). Relationship → verified fit files → co-signed drops later. Never cold-ask before their file has traffic.

Phase 3 — Community (with backend)

Live rooms per fit · Fit Check Friday (mirror the Reddit ritual on-platform) · style-twin shareable cards (the Wrapped moment) · Pro \$5/mo: AI try-on + unlimited unlocks once server-side.

Metrics that matter

Weekly: fit-file opens, breakdown unlocks, outbound Buy clicks (revenue proxy), accounts created, % returning for fit-of-the-day. Ignore vanity followers; watch Reddit answer→click rate.

90-day cadence

Daily: 20 min Reddit answers. Mon/Wed/Fri: new fit file + IG carousel + TikTok. Weekly: catalog refresh script, 10 Pinterest pins. Monthly: brand-partner email batch (5), review metrics, cut what's flat.

One sentence to never forget: Pinterest shows something that looks like it — Fits From tells you what it is, in your size, from the source.
